Carbon Fiber Front Fender Extractors

Excessive heat can cause major and expensive damage to critical components in a car. Engine bays, radiators, brakes, transmissions, and differentials all need good air flow to help transfer away unwanted heat. APR Fender Vents help reduce high pressure air that builds up in the wheel wells. Built using pre-preg. carbon fiber reinforced polymer (CFRP) composite materials for superior strength-to-weight ratio, APR Fender Vents add both function and "lightness" where it counts.

Carbon Fiber Canard/Splitter

Front Bumper Canards and Spats are the perfect answer to aerodynamically tune the handling for the front of a car. Made of lightweight and durable carbon composites, Front Bumper Canards and Spats help increase front downforce at high speeds. The added downforce stabilizes the cars chassis during hard cornering and increases traction for faster lap times.

Carbon Fiber Gurney Flap

These are super lightweight, made in carbon fiber using the pre-pregated "dry" carbon process, and conform perfectly to the contours of the original AMG GTR wing. They are easily attached using the included double-sided tape.

*Fit Factory Wing Only

Carbon Fiber GTC-500 Adjustable Wing

Each GTC Series airfoil is composed of lightweight and durable carbon fiber reinforced polymer (CFRP) composite materials. These airfoils contain pre-pregated woven carbon fiber sheets for superior strength and low weight. All CFRP airfoils are made using pre-pregated composite manufacturing processes (i.e. high-temperature autoclave and vacuum bagging) in high-quality aluminum billet molds.
